

SMARTORK™ DOOR SPIRATOR

Part No. SMARTORK
SmarTork™ Door Spirator

Part No. ST-BK
Mounting Bracket

Product Description

The SmarTork™ Spirator is a revolutionary elevator door closer designed to overcome wind shaft velocity as the door closes. The SmarTork's patent-pending helical groove design provides more tension in the door-closed position than in the door-open position—actually regaining tension as it closes the door. The SmarTork cuts energy costs and reduces callbacks associated with wind shaft velocity issues.

Key Features

- Reductions in peak amp loads by an average of 0.33A per operation
- 9.2% power savings per cycle
- Saves money on non-chargeable and non-billable hours for elevator companies dealing with wind shaft velocity issues
- “Uni-Hub” allows for easy installation or replacement to systems having a square shaft or dual pin mounting bracket configuration

Mounting Bracket

This proprietary bracket allows an additional ½” of clearance between the heads of mounting screws and the SmarTork™ Spirator. It can easily replace most existing mounting brackets with or without the SmarTork™ Spirator fastened to it. This bracket can also be used on all spirators up to a 5-1/2” diameter with a square hub.
