

# ROPE DESCENT SAFETY TOOL

Part No. 60-10051163

## Product Description

The **Rope Descent Safety Tool** is to be used in conjunction with the **2:1 Rope Brake**. It is a complementary tool which will allow the user to control the descent speed of the spool of elevator cable without having the brake pads on the Rope Brake. It uses 4x4 blocks of hard red oak for a high life span. The blocks may be turned and re-attached once wear gets to an unacceptable level.
