

INTERMEDIATE DUAL-LINE RAIL ALIGNMENT CLAMP

10-291 to 10-294
Intermediate Dual-Line
Rail Alignment Clamp

PRODUCT DESCRIPTION

Intermediate dual plumb line clamps are used during mid- to high-rise installations to clamp plumb lines at intermediate points along the vertical distance of the hoistway.

While the plumb lines are ratcheted to be tensioned at the bottom of the hoistway, the intermediate clamps provide additional guidance and re-alignment of the plumb lines relative to the rail position.

(4) intermediate dual plumb line clamps are available, each designed to match a different rail size. See the table for more information.

KEY FEATURES

- Precision alignment holes referencing rail machined surfaces
- Rotating alignment blocks allowing plumb lines to easily pass through alignment holes

Rails Part Number	Rails Nose Widths	Clamps Part No.
