

10-148
Joist Bracket

PRODUCT DESCRIPTION

Designed for secure attachment to poured concrete walls, this joist bracket provides a rated load capacity of 1,000 lb when installed using the specified anchoring method. Proper installation is required to maintain the stated capacity and ensure reliable performance in the intended application.

KEY FEATURES

- Rated for a maximum capacity of 1,000 lb
- Designed for installation on poured concrete walls
- Requires two 3/4 in. Hilti TZ or KB3 Kwik-Bolts
- Anchors must have a minimum embedment of 4 in.
- Fasteners must be torqued to 100 ft-lb
- Any alternate wall type, anchor, or installation method requires application-specific engineering approval

NOTE: The stated capacity is based solely on installation in poured concrete using the specified anchors, embedment depth, and torque. No calculations or testing have been performed for other wall types or attachment methods.
