Low-Clearance Piston Clamp

PRODUCT DESCRIPTION

Wurtec's **low-clearance piston clamp** is the ideal tool for securing hydraulic elevator pistons during installation. Its innovative design allows mechanics to easily hoist and precisely position the piston, making the threading process smooth and efficient.

With a low-clearance profile, the clamp can be installed in tight spaces, fitting pistons as **close as 2 inches from a nearby wall**. This versatility makes it perfect for installations with restricted space.

The clamp's rated and tested hoisting capacity makes it a safer alternative to outdated methods such as hardwood blocks.

Includes Socket

KEY FEATURES

- Accommodates cylinders ranging from 2.25" to 6" in diameter
- Lifting capacity up to 650 lbs.
- Specially engineered for safe, stable lifting directly from the clamping body
- Includes custom socket designed to fit over threaded rods to tighten Acme nuts quickly and securely

ADVANTAGES

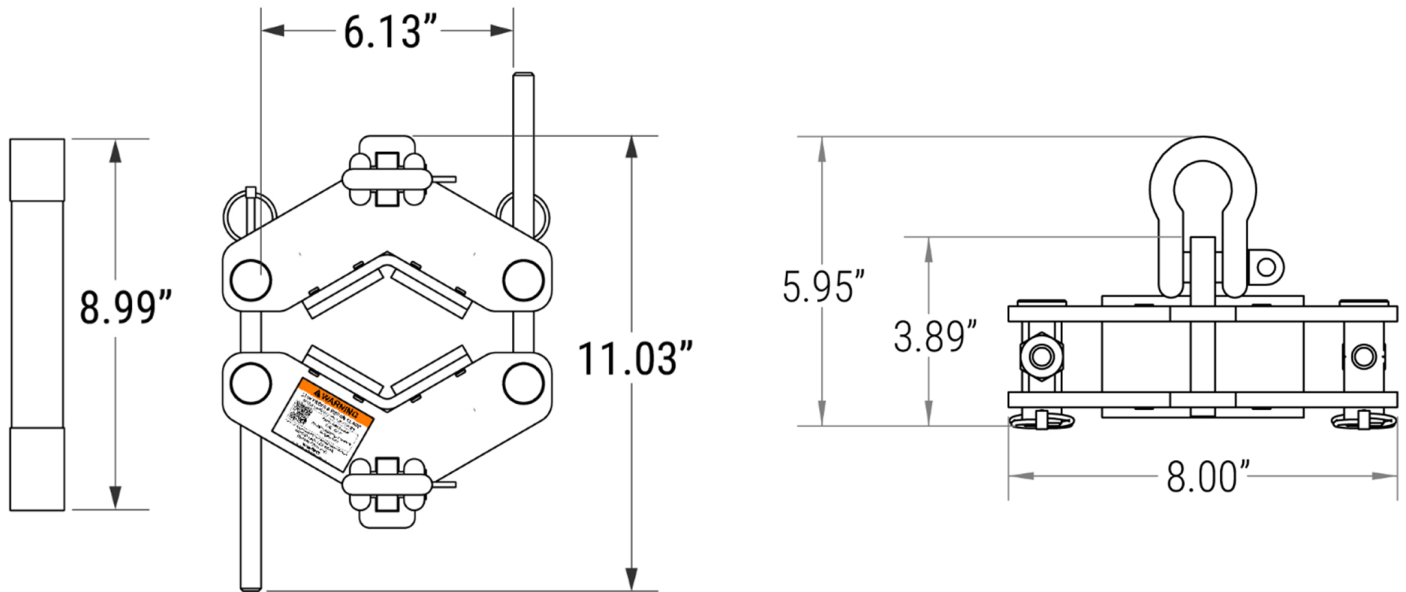

- Compact storage & shipment. Breaks down quickly for efficient storage and transportation.
- Durability & strength. Replaceable pads and robust, welded steel construction ensure long-lasting performance and higher clamping force vs. wood
- Easy adjustments. Designed for hassle-free operation and precision adjustment.
