PRODUCT DESCRIPTION

Prevent Unintended Access to Elevator Pits with Wurtec's Pit Ladder Guard Kit

Wurtec's Pit Ladder Guard Kit offers a simple, effective way to prevent access to the elevator pit while the elevator is in operation. Designed to meet ASME A17.1-2022 / CSA B44:22 Section A17.1 2.2.4.2.7 code requirements, it enhances site safety with minimal effort and maximum compatibility.

Weighing only 3 pounds, the guard features a durable one-piece design for fast, hassle-free installation. It's compatible with most pit ladders—including those from Wurtec and other suppliers—with standard 16-inch stringer spacing and 12-inch rung spacing. It fits both round and square rungs from 1 inch to 1-1/8 inches in diameter and integrates easily with passive safety chain systems already in place.

Each kit includes a safety switch that mounts directly to the ladder stringer and wires into your existing safety circuit. The switch can be installed on either side of the guard for added flexibility, and a tethered safety key helps prevent the switch from being bypassed.

With straightforward installation and built-in compliance, the Pit Ladder Guard Kit is a smart choice for protecting personnel and keeping your job site up to code.

Versatile safety switch placement
