Dragon Rescue Firefighter
Rail Block Kit

PRODUCT DESCRIPTION

During elevator rescue operations, preventing unintended car movement is critical to ensure the safety of passengers and first responders. Makeshift blocking methods are often unreliable, slow to deploy, and unsafe.

That's why Wurtec and Dragon Rescue Management have teamed up to bring you the Dragon™ Unexpected Movement Process (DUMP) - a complete rail block kit for firefighters.

With quick setup and tool-free operation, this adjustable system locks onto elevator rails to stop both upward and downward movement - giving rescue personnel total confidence in critical situations.

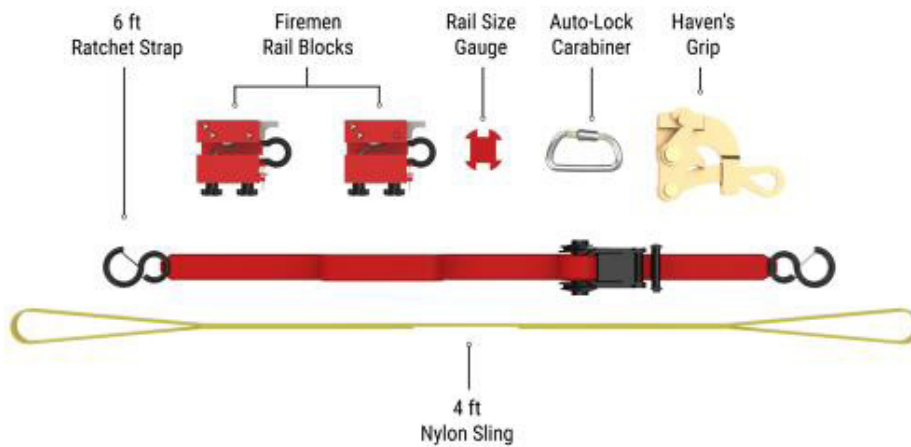

KEY FEATURES

- Automatic Locking Mechanism
- The system automatically secures onto the rail upon installation - no tools or torque required.
- Dual-Block System
- Upper block engages the safety mechanism to prevent downward movement.
- Lower block physically blocks the car's guide roller wheels to prevent upward movement.
- Adjustable Fit
- Accommodates rail sizes from 5/8" to 1-1/4", allowing one kit to cover a wide range of installations.
- Spacers Stay Put
- Each block is secured to the main body with a metal lanyard, so they won't be lost during operation.
- Reliable, Easy Release
- To remove, just pull the charging handle - quick and simple, even with gloves on.
