Single Belt Holdback

70-SBR-01
Single Belt Roller

PRODUCT DESCRIPTION

Wurtec Belt Tools are designed to help technicians manage, organize, and position traction elevator belts during maintenance, inspection, adjustment, and replacement procedures. Developed specifically for modern belt-driven elevator systems, the product line includes Holdbacks, Hoist Bar Kits, and Rollers that provide practical solutions for securing belts, organizing single or multiple belt configurations, and supporting controlled belt movement throughout service operations.

Designed with a modular approach, the Belt Maintenance Tool family accommodates a wide range of maintenance requirements. Single Belt Hoists can be used independently or combined with Hoist Bar Kits to create dual, three, or four belt configurations, while Holdbacks and Rollers provide additional solutions for controlled belt restraint and positioning, helping improve efficiency during traction elevator maintenance.

KEY FEATURES

- Designed for traction elevator belt maintenance
- Complete family of Holdbacks, Hoist Bar Kits, and Rollers
- Supports belt inspection, adjustment, replacement, and positioning
- Modular Hoist Bar Kit system for multiple belt configurations
- Single Belt Hoists can be used standalone or with Hoist Bar Kits
- Hoist Bar Kits available as complete assemblies or individual components
- Controlled belt restraint and positioning during maintenance
- Defined working load capacities for each tool configuration.
