

10-500
Hydro Spider

PRODUCT OVERVIEW

The Wurtec **Hydro Spider** is an adjustable alignment tool designed to center and align hydraulic elevator pistons and cylinders during installation and maintenance. Its symmetrical adjustment mechanism allows the center rod to rotate while four spring-loaded legs expand evenly, making it easy to position the tool for a wide range of cylinder diameters.

Designed for versatility and ease of use, the Hydro Spider adjusts from 3-7/8 in. to 14 in. (98–356 mm) in diameter to accommodate a variety of hydraulic cylinder sizes. A pre-drilled hole in the center adjusting rod provides a convenient attachment point for a plumb line or string, while the yellow zinc chromate finish helps protect the tool from corrosion in demanding jobsite environments.

KEY FEATURES

- Centers hydraulic elevator pistons and cylinders.
- Weighs only 25 lbs (11 kg)
- Adjustable from 3-7/8 in. to 14 in. diameter.
- Four spring-loaded legs provide symmetrical adjustment.
- Center rod rotates for precise positioning.
- Pre-drilled center hole accepts a plumb line or string.
- Yellow zinc chromate finish resists corrosion.
- Durable design for repeated field use.
