

**10-510
Halo Light Kit**

PRODUCT OVERVIEW

The Wurtec Halo Light Kit provides a fast and accurate method for aligning hydraulic elevator cylinders during installation. By suspending a centered light source inside the cylinder, the system creates a uniform “halo” of light around the centering disk when the cylinder is perfectly plumb, allowing technicians to quickly identify and correct misalignment before installation is complete.

Designed for ease of use in the field, the Halo Light Kit includes a Hydro Spider assembly, aluminum centering disks, a battery-powered light source, and 75 feet of non-twisting line with an attached swivel hook. Together, these components provide a reliable, repeatable solution for achieving accurate cylinder alignment while reducing setup time and improving installation precision.

KEY FEATURES

- Verifies hydraulic cylinder plumb during installation.
- Creates a visible “halo” to indicate proper alignment.
- Includes Hydro Spider for accurate centering.
- Battery-powered light source for field use.
- Includes multiple aluminum centering disks
- Supplied with 75 ft. of non-twisting line and swivel hook.
- Provides fast, accurate, and repeatable cylinder alignment.
- Weighs only 14 lbs (6.35 kg)
