

Mounting Bracket

Description

The C417-6015 High Bracket is used for attaching a Capstan Hoist to a flat surface such as an elevator landing or wall. The High Bracket easily and quickly attaches to the Capstan Hoist.

Steps:

1. Line up the four (4) threaded holes on the flange of the Capstan Hoist with the four (4) clearance holes on the High Bracket. As shown in the drawing the clearance holes on the High Bracket are in the arc while the threaded holes in the hoist are in the flange.
2. Tighten four(4) 1/2-13 X 1" Lg. bolts through the High Bracket into the Capstan Hoist and tightening to secure the hoist to the bracket.
3. The last step is to fasten the High Bracket to a level surface securely. Use a minimum of four(4) 5/8" anchors and anchor them into a concrete floor.
