CABLE BAND DATA SHEET

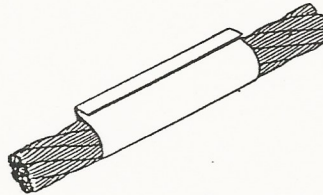

THE CABLE BAND is a sheet of pliable but very tough steel indented with a groove and lock seam at one edge and is made in lengths and sizes to fit the various sized cable up to 1 1/2" in diameter. Its application is simple, requires no special tools and may be made in 20 seconds with an ordinary pair of pliers.

THE MORSE-STARRETT WIRE ROPE BAND provides a perfect serving for wire rope ends, easily applied, clean and safe.

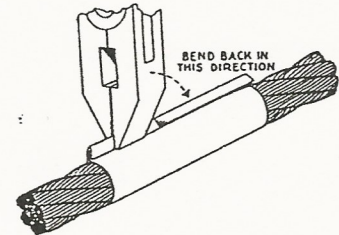

APPLICATION

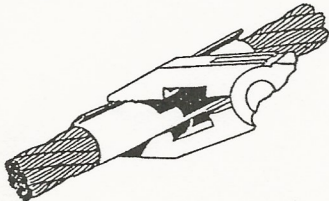

1. Take band of proper size and place against the cable with the open side of the reverse bend towards the cable

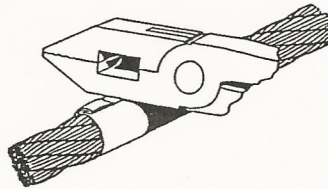

2. Bend the band around the cable with fingers, inserting straight edge fully into the reverse.

3. Crimp with pliers, pulling the band tight. Crimp the bent edge over the straight edge back upon itself to form the seam.

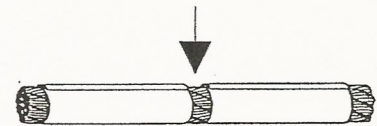

4. After seam is formed and bent back on itself, press flat with pliers.

5. Tap seam lightly with pliers until flat and compact.

CUT HERE

6. Place second band in the same manner as above 1/8" to 1/4" from the other and cut cable between the bands.

CABLE BANDS - Galvanized Steel

Packaged in boxes of 50 pieces. Each size rope requires a band of corresponding size.
