Time-Out Jumper

15-505KIT
Time-Out Jumper

Part No.	Rated Current	Weight (lb · kg)
15-505	250V, 8A	1.5 · 0.68
15-505KIT	250V, 8A	2.0 · 0.91

PRODUCT DESCRIPTION

The Wurtec time-out jumper is designed to “time out” after a user-defined period of time to ensure the elevator doesn’t run with circuits mistakenly jumped out.

This prevents the serious dangers that can result if a standard jumper is left behind, such as the elevator running with the doors open, with a stop switch in the off position, or at a high speed when it should be slowing down.

Small but versatile, the Wurtec time-out jumper is the ideal fail-safe device to protect elevator engineers, maintenance professionals, and passengers alike.

KEY FEATURES

- Flashing LCD screen to warn when time is running out; a reset is possible
- Programmable time duration
- Programmed with only 2 buttons
- SERIAL NUMBERS for identification and NAME for personalization programmable through mini USB port
- Password protection for timer programming
