Description

Wurtec's Temporary Escalator Steps are specifically designed to aid in the maintenance and repair of escalators. The device hooks and securely latches to one of the escalator step axles. Each step can be folded upright to be near level allowing the mechanic or repair person a safer more stable environment. The Temporary Escalator Steps eliminate the need to stand directly on the axles.

Instructions

- Do all necessary preparations, and remove at least four escalator steps.
- Attach The Wurtec Escalator hook Stairway so the hooks lock on the top Axel. *Figure 1 (hooks)*
- Lift the steps up and latch into place such that the pin rests in the up position notch. *Figure 2*
- Do all necessary work prior to removing the Wurtec Escalator Hook Stairway.
- Once completed pull strings on the side channels to release, Then push up the stairway up the escalator and lift off the axel. *Figure 3.*
