

Quick Release Clevis (QRC) with Rope

Part No. 11-255

Instructions

The Wurtec Quick Release Clevis with Rope Retaining U-Bolt offers additional security for retaining your hoist rope while hoisting. The U-bolt captures the rope and ensures that the clevis does not slide off the end of the rope.

1. Open the clevis by rotating the lift bar handle so that the locking pin aligns with the keyhole slot and allows the handle to slide out.
2. Thread your rope through the U-bolt, and tie it off. Add a knot to the dead end of the rope large enough so that it cannot pass through the U-bolt.
3. Attach the clevis to the item to be lifted by reinserting the lift bar through the product to be hoisted and into the keyhole slot, then rotate the handle down so that the handle points down, locking the lift bar into place.
4. You are now ready to hoist your item.

Part No.	Description	Capacity
11-255	Fits hole diameter down to 1/2"	500 lbs.
11-260	Fits hole diameter down to 9/16"	600 lbs.
