

70-180
Omega Hoist Rig

PRODUCT DESCRIPTION

The Omega Hoist Rig is a purpose-built lifting solution designed to create a safe and secure hoisting point by clamping directly onto an omega-shaped elevator guide rail. Engineered for use in elevator hoistways, the rig enables technicians to efficiently lift and position heavy components during installation, maintenance, and modernization work.

The device mounts quickly to the rail without permanent modification and provides a reliable attachment point for rigging equipment. With a Working Load Limit of 1000 lbs (454 kg), it is well-suited for hoisting components such as hydraulic cylinders and similar equipment into position.

KEY FEATURES

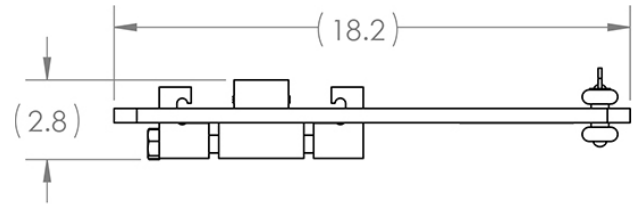

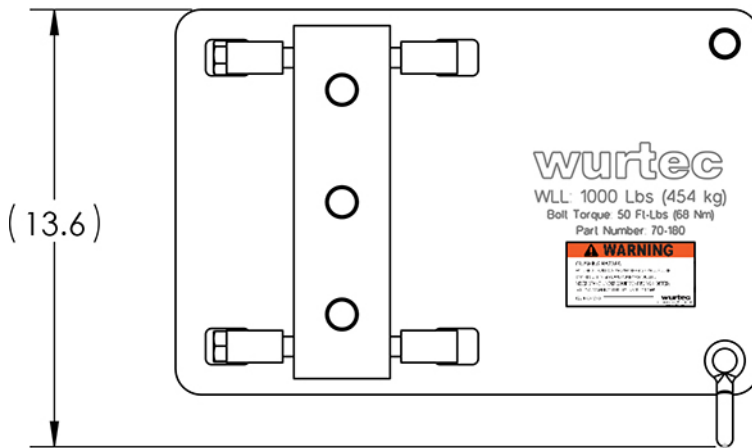

- Clamps securely to omega rails using four gripper blocks for stable load support.
- Uses two 5/8"-11 x 7" hex bolts to apply controlled and even clamping force.
- Internal tap block with round grippers enhances grip on the rail's inner profile.
- Integrated anchor shackle provides a reliable hoisting connection point.
- Rated for a 1000 lb (454 kg) working load capacity.
- Reversible design allows hoisting from either side of the rail.
- Installs quickly without requiring permanent rail modifications.
