

## **CAPSTAN HOIST with FOOT CONTROL**

**Part No. C308-1170**

## **DESCRIPTION**

The portable lightweight **Capstan Hoist** delivers high-torque muscle with constant control. Compact size in 115 Vac with 1000-lb capacity at 40 FPM. Convenient for construction and maintenance because it relocates quickly and anchors to I-beams, floors, walls, and other structural supports.

The weather-tight foot control switch allows the operator to easily control raising or lowering of loads. The backstop clutch performs positive holding and works with polydacron or polyester blend ropes. Its unique rope retention system prevents the rope from leaving the drum when used in conjunction with the rope locking device.

## **⚠ WARNING**

- Always mount the hoist to the proper bracket using the high-strength bolts and fasteners supplied with each hoist.
- Never operate the hoist without the foot control.
- Never overload the hoist.
- The hoist is made to lift equipment and pulling cable.  
**Never lift people or raise loads over people.**
- Never use a malfunctioning or damaged hoist.
- Never move a load the operator cannot see.

| Part No.         | Description               | Weight<br>(lb · kg) | Capacity<br>(lb · kg) |
